HOW PSO POWER HOURS WORKS:

- During periods of high demand for electricity, PSO may declare a “Peak Event.”
- During a Peak Event, PSO may automatically adjust your thermostat by no more than four degrees to reduce energy consumption. **You can opt out at any time.**
- Peak Events can occur up to 16 times from June to September between 2pm-7pm on non-holiday weekdays or during a system emergency.
- When a peak event ends, your thermostat returns to its original temperature setting.
